

TRACKWISE® **QUALITY MANAGEMENT REVIEW**

Honeywell

TRANSFORMING THE QUALITY MANAGEMENT REVIEW PROCESS

Quality Management Reviews (QMR) are a crucial component of a successful Quality Management System (QMS).

QMRs are a structured and comprehensive assessment of an organization's quality system's overall effectiveness, suitability and performance. In today's business environment, where quality is a significant factor in setting organizations apart from one another, QMR has the potential to transform how organizations manage, oversee and enhance their quality systems.

The current QMR process, although a regulatory requirement aimed at enhancing the QMS, is time-consuming, costly, and characterized by an excessive

use of man-hours, resulting in a non-value-added PowerPoint exercise that fails to garner appreciation from executive management.

The TrackWise Quality Management Review application can completely transform this process by eliminating the need for slideware, while automating and optimizing the data analytics, for a near real-time report with intelligent and actionable insights.

IMPROVE EFFICIENCY & DECISION MAKING:

Streamlined processes, intelligent workflows and automation for faster, more informed decision-making.

AUTOMATION AND COLLABORATION:

Gather data across all quality processes quickly and efficiently, reviewing the data across groups to monitor, correct, and improve the quality function.

QUALITY INSIGHTS:

Proactively monitor quality in near real-time to reduce risks to the quality management solution and drive improvements over time.

REGULATORY COMPLIANCE:

Manage regulation guidelines with a fully validated and digital solution.

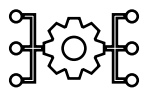

Imagine a world where tedious manual tasks of collecting data from multiple systems of record are replaced by seamless API connectors, embedded analytics provide meaningful insights, and collaborative environments where e-signatures and digital tools are at your fingertips, empowering you to facilitate review processes effortlessly.

**THIS IS NOT A DREAM;
THIS IS OUR REALITY.**

FEATURES

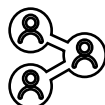

Proprietary Data Fabric/ API Connectors

Native integration library, API connections to easily collect data from multiple systems of record without extensive coding or implementation efforts.

Automated Data Collection

Quickly obtain data from multiple systems of records in minutes to increase operational efficiency and data accuracy, removing redundant processes and errors.

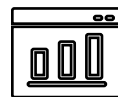

Digital Collaboration

Remove the need for slideware and physical meeting spaces. Access all quality metrics and recommendations in one centralized location to get timely data and improve usability and data integrity.

Dynamic Data Visualization

Fully transparent and flexible analytics with interactive dashboards for presenting complex information in a comprehensible and actionable format, consistent across sites.

Multi-Site Rollup

Consolidate and summarize data and findings from different sites to create a high-level overview for senior management that helps assess overall QMS performance across all sites.
